

APPENDIX A-46

RECEIPT AND ADJUSTMENT SUFFIX CODES

1. Number of characters: One.
2. Type of Code: Alpha.
3. Explanation:
  - a. These codes are entered by elements of the distribution depot when two or more documents are required to report a specific transaction. These codes identify partial quantities or different condition codes, without duplicating or causing loss of identity of the original document number. The appropriate code is entered in pos. 44, when required, on the following documents:
    - (1) Local Prepositioned Materiel Receipt Document (DICs DU\_, DW\_).
    - (2) Materiel Receipt Document (DICs D4\_, D6\_).
    - (3) Materiel Adjustment Document (DIC DAC).
    - (4) Deleted Item Report Document (DIC CK8).
  - b. Position 44 is left blank when the total quantity can be reflected on one document and different condition codes do not apply.
4. Distribution depots assign alpha codes A through Z when required and will ensure that the same code is not duplicated for the same document number.
5. See appendix A-7 for Issue Transaction Suffix Codes.
